Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11, 14, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants admitted prior art in view of Mayer.

The method as claimed is substantially disclosed by applicants admitted prior art at page 3 lines 15+, but lacks the gauge having a density pattern on a transparent sheet with the density pattern formed by various shapes and sized markings. Mayer teaches using a gauge with various density patterns on a transparent sheet for comparison purposes. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a gauge with standard density patterns in the method of applicants admitted prior art as taught by Mayer to provide a consistent standard in the comparison method. The shape and size of an item lacking some criticality are not considered patentably distinct. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use old and well known shapes and sizes as claimed in the density pattern of the combination of applicants admitted prior art and Mayer combined to produce various density patterns as desired.

3. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mayer.

The gauge as claimed is substantially disclosed by Mayer with various density patterns on a transparent sheet for comparison purposes, but lacks the shape and size of the particles making

up the density pattern. The shape and size of an item lacking some criticality are not considered patentably distinct. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use old and well known shapes and sizes as claimed in the density pattern of Mayer to produce various density patterns as desired.

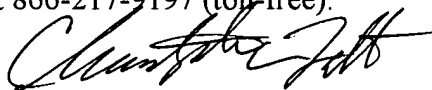

Allowable Subject Matter

4. Claims 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
